

Eniac

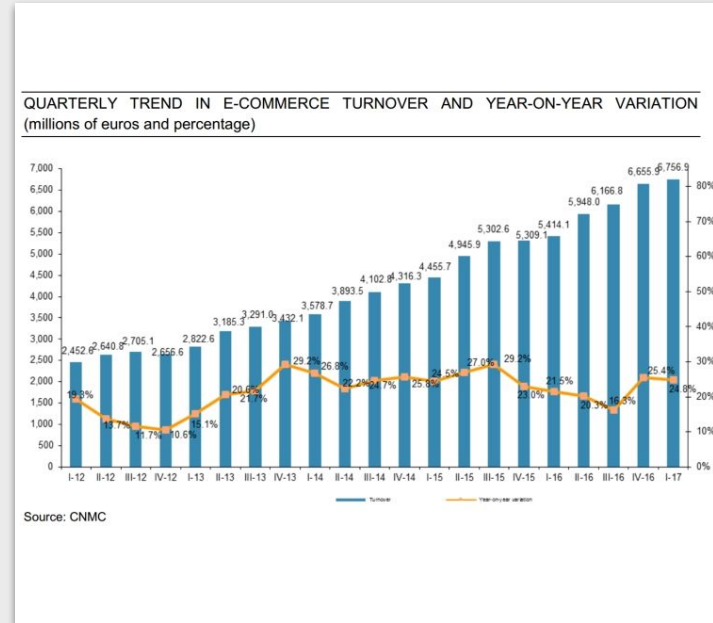

Exploration of the discount strategy

– Pandas@Work

Eniac is an online marketplace specializing in Apple products & Apple-compatible accessories.

Spanish E-Commerce Market

- Spain, together with Germany and France, is one of the 3 largest online markets in the EU.
- In 2017, the overall e-commerce during Q1 2017 (115M transactions) increased by 24.8% year-on-year.
- E-commerce market is growing rapidly.
- The number of online buyers is projected to reach 37 million by 2025.
- Consumer electronics remained one of the top categories for online purchases.
- Spanish consumers are demanding, prioritizing free returns, quick delivery, and product quality.
- Spanish consumers are highly price-conscious, often abandoning brands for cheaper alternatives (75% search for better deals).

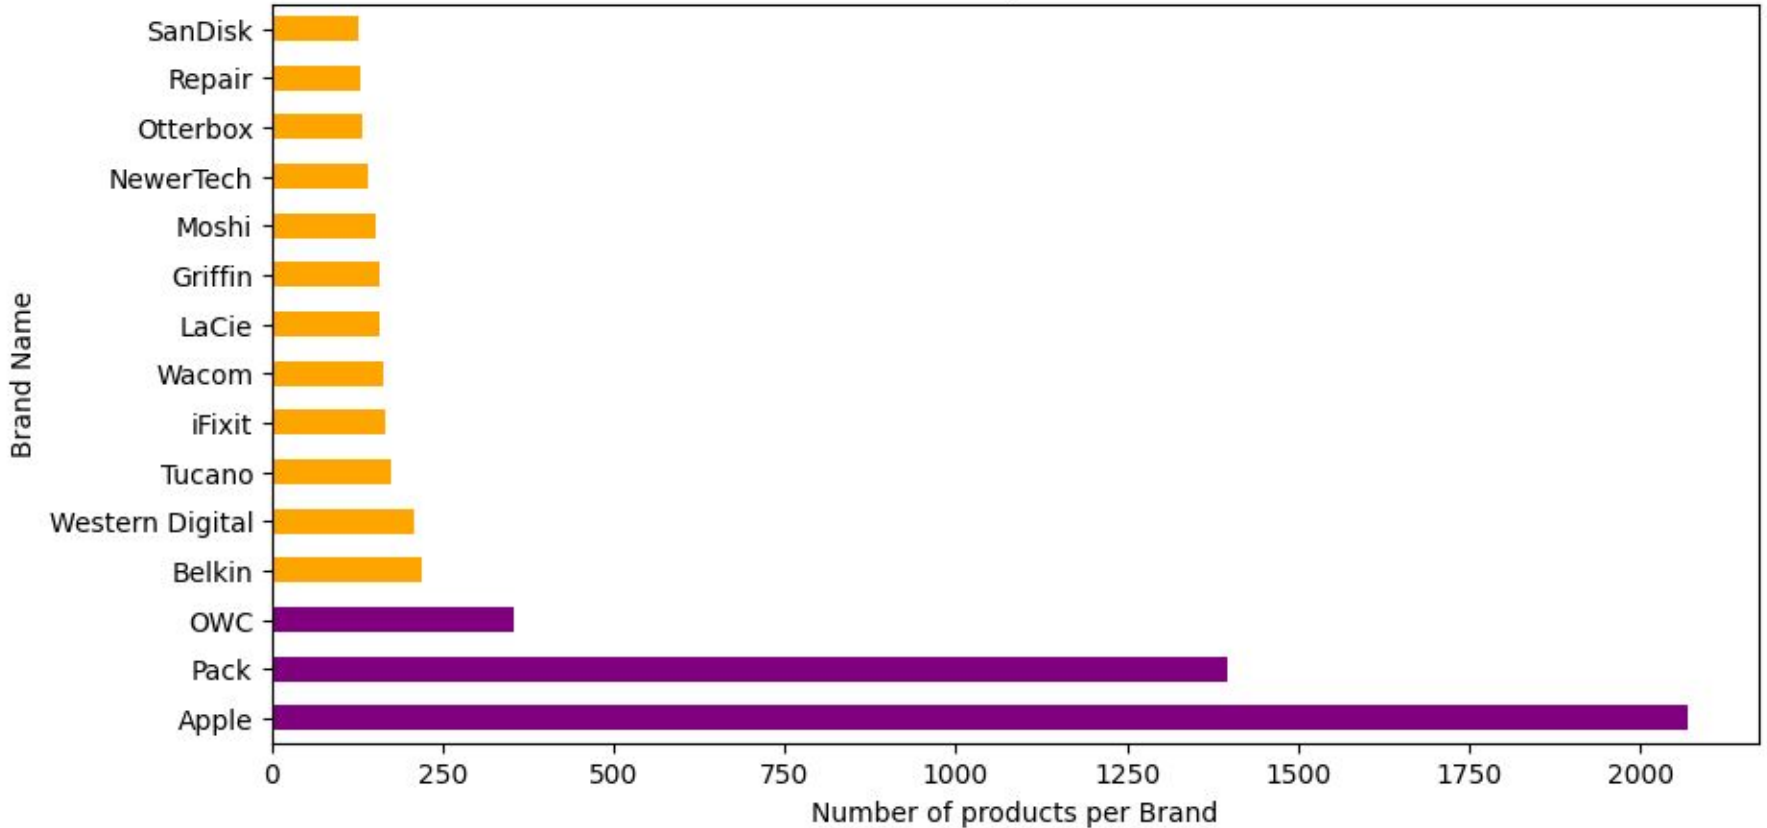

Price Sensitivity and Consumer
Behaviour Drivers lead to explore the
discounts strategy at Eniac

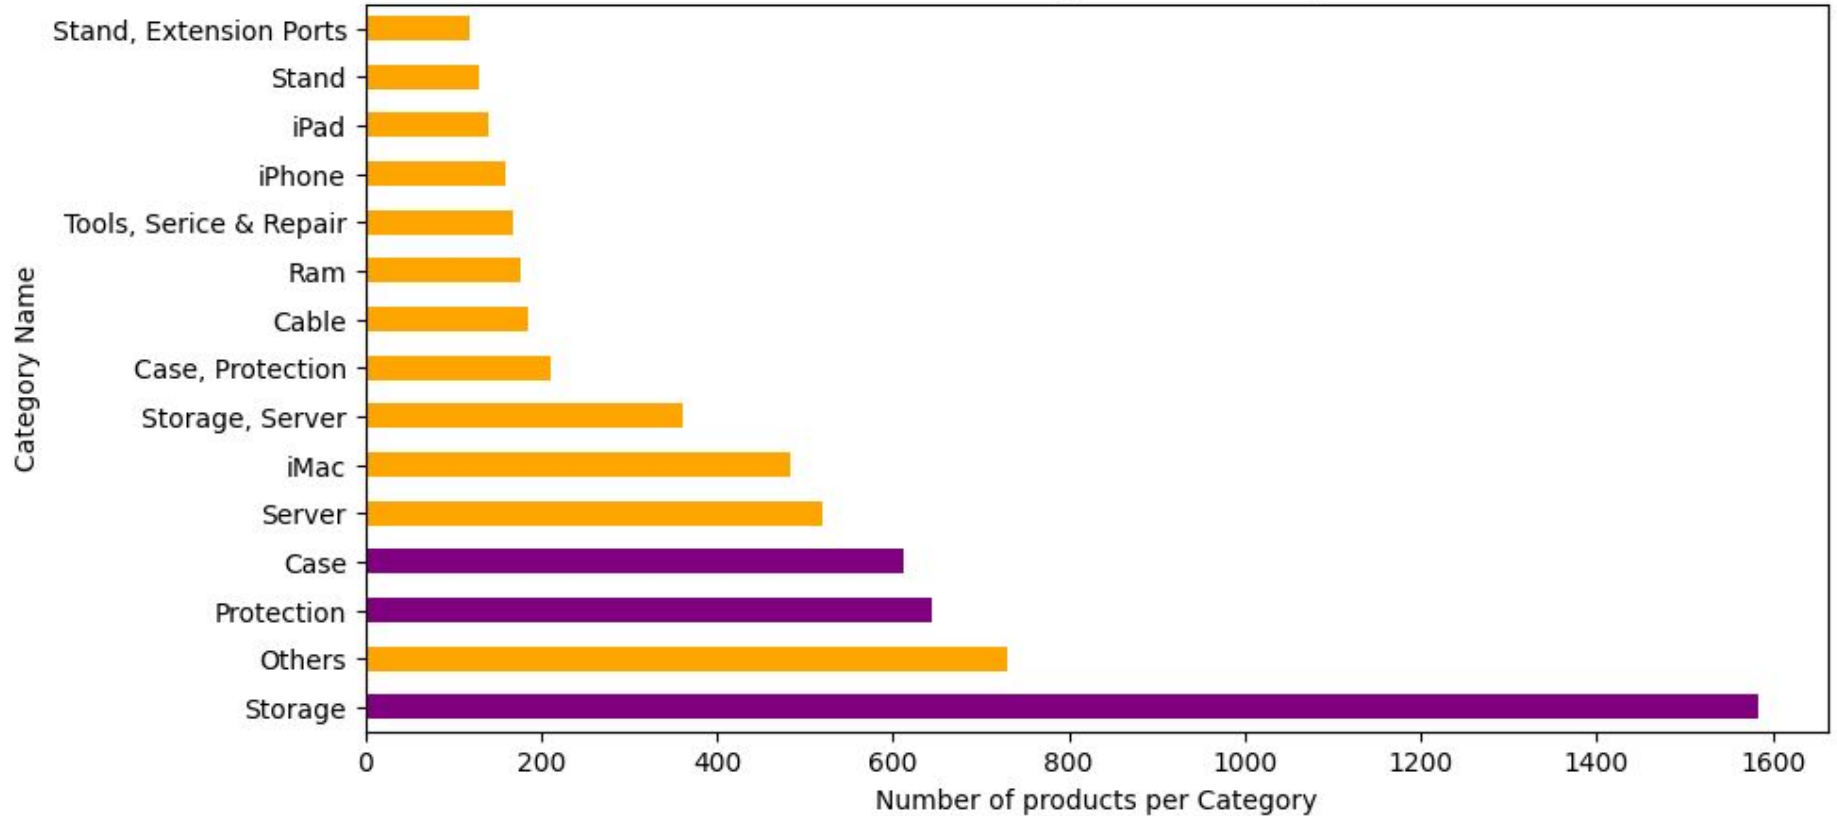

Product Categories

Though Eniac is an Apple based online marketplace, the platform hosts products from many other brands. Also, there is a diverse range of products available on the platform.

Discounts & Strategy

Smartphone Analysis: Strategic Timing vs. Discount Impact

Data Collection

Aspect	Issue
discounts	calculated based on available date and assumptions.
Cost	Actual cost of the products is not available.
Nan values	Were hindering the necessary calculations
Decimal separators	Too many mixed values with multiple decimals. Standardisation needed.
Product placement	Were placed in different categories (created outliers)
Small proportion of the working data	Out of ~270,000 lines of data only 50,000-60,000 lines (only completed orders) were considered for this analysis.

Conclusion

- We need more information to give a final conclusion as discounts prove to be both beneficial and detrimental as well!

Thank you!!
